Integrare is a lightweight Windows application whose purpose is to help you create binary patches for software programs. This Win32 patching utility gives you the freedom to grab only the information that has changed between versions. The comfort of working with portable tools You may copy the utility on any USB flash drive or other devices, carry it with you and run it on the target computer without administrative privileges. Uninstalling it means deleting the files that you have grabbed from the Internet. The utility does not leave entries in your Windows registry. There's no installation process involved in deploying it on your system, as you only need to open the executable file. Clean feature lineup With the aid of a multi-tabbed layout, Integrare places the most important features of the application at your fingertips. You may configure update and application details, and tweak source files. You can control the tool via the command-line console or GUI. Both options deliver the same results but only the first mode can be automated. If you work with the GUI, you are allowed to save the current settings to a file so you can easily import them in your future projects. Update settings You can enter the title that is displayed when running the current patch, write a user-defined welcome message that is shown on the first page of the patch installation process, and provide details about the license. Furthermore, Integrare helps you set up a password, pick the saving directory and filename, and select the language. Application tweaks and source file configuration When it comes to configuring the parameters related to the target application, you are allowed to provide the default installation folder, key file and named mutex. Integrare offers you the option to select the working folder, indicate the directories for the existing and new version, apply file mask, as well as exclude the files that you do not want to include in the patch. Bottom line To sum things up, Integrare provides a straightforward solution for helping you create binary patches for software programs, and can be handled by all types of users, regardless of their experience level.
